### **Confidence in a Roof Coating**

What is important when deciding to re-coat your weather-beaten roof; *Colour? - Gloss? - Price?*

How about confidence? Is what you are paying for going to perform year after year?

With the Acryloc CRC Roof Coating System, the answer is "absolutely yes"; a superb finish, superior durability and great value all backed by the manufacturer's track record!

### **Confidence in Protection**

Acryloc CRC Roof Coatings are designed specifically to cope with Australian conditions.

From chilling salt spray on the coast to hot and dusty deserts, Acryloc CRC can handle it all.

As well as being durable, Acryloc CRC has the in-built flexibility to cope with rapidly changing roof surface temperatures throughout each day.

Some Acryloc CRC colour coats actually contain the same ingredient used in sun screen lotions to block out harmful effects of UV radiation.

### **Confidence in Colours**

The choice is yours!

Acryloc CRC Roof Coatings are available in a wide range of standard colours for the colour conscious property owner of today.

The modern, stylish range of 40+ colours fits well with recent trends in property exterior colour choice as well as with traditional roof colours.

### **Confidence in long-lasting**

The pigments used in all CRC coloured top-coats are premium quality exterior grade products.

These are combined with the other carefully selected ingredients in our closely controlled manufacturing process.

The end result is high quality coatings which will enhance your property for years to come.

### **Confidence in the Future**

The Acryloc CRC Roof Coating System is fully supported by our manufacturer's product replacement warranty. This protects you for a period of ten years if there is any peeling or flaking of the CRC system caused by a defect in our product.

Of course the product must be used in accordance with our recommendations and we cannot cover damage due to movement of the substrate or structure.

***Have CONFIDENCE in the system which gives your roof supreme PROTECTION while restoring its former BEAUTY!***

Commercial Roof Coating SYSTEM

### Confidence in Safety

An Acryloc CRC coated roof is safe for the collection of drinking water once the coating has cured.

By choosing Acryloc CRC you are helping to protect our precious environment. Low VOC levels minimise damage to the ozone layer during application and curing.

Additionally, water recycle is part of our standard factory practice; with over 80% of water used to clean our equipment being collected so it can be re-used in the manufacturing process.

### Confidence in the System

The Acryloc CRC system meets a wide range of needs in a straightforward and uncomplicated manner.

The system includes a Heavy Duty Cleaner and a Mould Inhibitor while a separate Metal & Galv Primer and a Rust Converter are available for metal roofs.

Colours are prepared by adding our Tint Pac colourant to a CRC Base, giving reliable colour each and everytime.

Our Technical Data Sheets assist applicators to select the correct system components for each job and to accurately estimate the quantities required.

### Confidence in Choice

Additional options are available to improve appearance, performance or both.

These options include:

- High Build Undercoat - helps achieve a smooth finish on a rough tile surface, which in turn can improve gloss and reduce dirt build up.
- Terracote Gloss Finish - an optional higher gloss finish.
- Supaglaze™ Clear Coat, a clear 100% pure acrylic coating for unglazed Terracotta tiles or concrete roof tiles. Special additives provide enhanced water beading, reducing dirt retention and maintaining the finish.
